REM MODEL 2210 PERFORATOR

Description

The REM Model 2210 Perforator offers infinitely adjustable length (repeat) controls that can simply be adjusted "on the fly" from the PLC/Servo Interface. The perforator may be supplied as an "IN-LINE" unit, incorporated into the design of a Slitter / Rewinder or web process line. The perforating system may also be provided with a photo-electric registration control for following a printed mark or line on your material. Many knife perforation patterns are available.

Model 2210 Perforator Shown as a STAND-ALONE unit for cross perforating, in line with an existing web process.

Typical Products (to be perforated cross web)

- Films
- Protective Films
- Bubble Packaging Materials
- Paper
- Non-Woven's
